

## CASE STUDY

The Perth-based Council was the first local authority in Scotland to introduce Jaama's [Key2 asset management](#) software.

Replacing an outdated software system that was supported by assorted spreadsheets, Key2 has delivered a wealth of administrative, compliance and reporting benefits to the extent, they believe they have the best system available.

- Fleet size: 540 vehicles made up of cars, commercial vehicles and 1,600 pieces of plant and equipment
- Customer Since: 2008
- Key Personnel: Gregor Walker (Asset Management Officer)

Nearby local authorities Stirling Council and Falkirk Council followed the lead of Perth and Kinross and introduced Key2 to manage their fleet vehicles and other mechanical assets.

[Key2 Workshop and Stores Management](#) modules are used by the authority to deliver control of its workshop and parts stock and provide in depth performance monitoring across all service, maintenance and repair work undertaken.

The [workshop touchscreen functionality](#) has put an end to manual input with administration efficiencies saving 2.5 employee posts and enhancing job booking, workshop loading and work-in-progress controls to keep vehicle downtime to a minimum.

“

The Council now relies on Key2 so much that I could not imagine life without the system. The system is what the Council required and it delivers what it needs. There are plans to expand the Council's use of Key2 into other areas and are confident the software will further improve operating efficiencies and effectiveness and deliver additional administration improvements.

Gregor Walker - Asset Management Officer
